

OTT Streaming Intelligence

Analysis Report

Revenue, Customer, Subscription, Platform, Content & Geographic Analytics

Project title / landing screen

Project Objective

Build an interactive Power BI solution that converts raw OTT subscription and customer data into actionable business insights for revenue, customer retention, platform, content and geographic decision-making.

Technology

Excel • Power Query • Power BI • DAX

1. Data & Data Model

Data Sources

The project uses an Excel workbook containing one transaction fact table and six supporting dimensions.

Table	Business Purpose
FactSubscriptionSales	Subscription transaction, revenue, discount, payment and churn information
DimCustomer	Customer profile and status attributes
DimPlatform	OTT platform information
DimPlan	Subscription plan and billing attributes
DimContent	Content title, type, genre, language and rating
DimLocation	Country, state, city and region
DimDate	Calendar, month, quarter, week, year and financial-year analysis

Data Preparation

Power Query was used to promote headers, standardize data types, trim and uppercase identifiers, remove duplicate transaction/key records, handle invalid records and review missing attributes. Missing descriptive values were retained when a reliable value could not be inferred.

Star Schema

FactSubscriptionSales is the central fact table. DimDate, DimCustomer, DimPlatform, DimPlan, DimContent and DimLocation are connected through 1:* relationships with single-direction filtering from dimensions to the fact table.

Fact Grain

The fact table is maintained at subscription-transaction level, with Sale_ID representing the transaction grain.

2. Executive Overview

Dashboard screenshot

Key KPIs

- Total Revenue — 9.38M
- Total Customers — 299
- Active Customers — 126
- Churn Rate — 37.5%
- Renewal Rate — 40.0%

Visuals

- Revenue Trend
- Revenue by Region
- Revenue by Platform
- Revenue by Plan

Analysis

Provides management with a concise view of financial performance and customer health. The page combines executive KPIs with revenue breakdowns so stakeholders can move from the overall result to regional, platform and plan drivers.

3. Sales & Platform Analysis

Dashboard screenshot

Key KPIs

- Total Revenue — 9.38M
- Total Transactions — 2K
- Average Transaction Value — 4.42K
- Revenue per Customer — 31.38K

Visuals

- Revenue by Platform
- Transactions by Platform
- Revenue by Plan
- Revenue by Billing Cycle
- Monthly Revenue Performance

Analysis

Focuses on revenue and transaction performance across platforms, plans and billing cycles. Platform slicer testing confirmed that the KPIs and dependent visuals respond correctly to selection.

4. Customer & Subscription Analysis

Dashboard screenshot

Key KPIs

- Total Customers — 299
- Active Customers — 126
- Churned Customers — 112
- Churn Rate — 37.5%
- Renewal Rate — 40.0%

Visuals

- Customer Status
- New vs Renewal Subscriptions
- Churn by Segment
- Customers by Segment
- Subscription Trend

Analysis

Focuses on customer behavior and retention. The validated churn rate of 37.5% and renewal rate of 40.0% provide an important retention signal. Segment-level visuals support deeper investigation of customer behavior.

5. Content & Geographic Analysis

Dashboard screenshot

Key KPIs

- Total Revenue — 9.38M
- Total Transactions — 2K
- Total Content — 173
- Total Region — 5

Visuals

- Revenue by Genre
- Revenue by Content Type
- Revenue by Country
- Revenue by Region
- Top Content by Revenue

Analysis

Connects content performance with geography. Genre, content type, country and region visuals help identify revenue contribution. The Top Content visual is a revenue-focused Top-N view; its blank category is retained rather than silently excluding potentially valid revenue.

6. Key Findings

Revenue & Performance

- Total validated revenue is 9.38M across the current reporting scope.
- Revenue varies across platforms, plans, regions and content categories, enabling driver-level analysis.
- Monthly revenue shows a clear seasonal pattern with stronger performance around April-June and a lower point around August in the displayed overview.

Customer & Retention

- The model contains 299 distinct customers, including 126 active and 112 churned customers.
- Churn rate is 37.5%, while renewal rate is 40.0%, making retention a major area for management attention.

Content & Geography

- Genre, content type, country and region views provide multiple lenses for understanding revenue contribution.
- Geographic analysis shows APAC and North America as the largest displayed regional contributors, followed by Middle East and Europe.

Data Quality

- Missing attributes exist in selected descriptive fields. These were reviewed without inventing unsupported values.
- A blank category appears in the Top Content by Revenue visual because revenue exists without a usable content title. It is retained to avoid silently hiding valid revenue.

Business Recommendations

- Prioritize retention actions for segments with higher churn.
- Monitor renewal and churn together as leading indicators of subscription health.
- Use platform and plan performance to guide commercial focus.
- Use high-performing genres and content titles to inform promotion and content investment.
- Use regional and country-level performance to support market-specific strategies.
- Improve source-system completeness for missing customer and content attributes.

Conclusion

The completed Power BI solution provides a reusable analytical framework for OTT subscription performance. The combination of Power Query, a Star Schema, DAX measures and interactive dashboard pages converts operational data into business-ready insights.
